Education

Kirori Mal College, University of Delhi — Delhi, India
Bachelor of Science (Honours with Research) in Mathematics, Minor in Economics — *Nov. 2023 – May 2026*

Experience

Full Stack Developer — Mar. 2023 – Present
Freelance & Fractal — *Remote*

- Worked as a freelance full-stack web developer, securing projects independently on Upwork and through Fractal, a freelance agency
- Developed a range of internal business applications, e-commerce platforms, and designed digital media for brand communication, utilizing diverse web technologies and frameworks like Flutter, NextJS, Python (Tkinter, Selenium, Pandas), and others.
- Worked on miscellaneous improvements and fixes on React and Angular web applications, adding new features to pre-existing projects, complete with unit and BDD tests for the new features. The project 'DentMeds' listed below was part of the work for a client I contracted independently.

Software Developer (Contract) — Oct. 2023 – Apr. 2025
Tagglabs Experimental Pvt. Ltd. — *Gurugram, Haryana (Remote)*

- Began as an intern and was subsequently retained as a part-time/contract software developer after three months, reflecting strong early contributions.
- Led the development of the alpha release of a cross-platform augmented reality, location-aware mobile application using Flutter for Android and iOS.
- Developed an internal Flutter package for the application, integrating the SIFT algorithm for feature matching via native C APIs and the OpenCV library. Used Python's Django library for the back-end server of the platform.

Web Developer Intern — Nov. 2022
Dualite — *Remote*

Projects (click here for full list)

Drawing My College's Logo on the Complex Plane | *Python, Matplotlib, LaTeX* — 2025

- A representation of my college's logo on the complex plane.
- A self-motivated project where I, along with my co- author, Implemented the Discrete Fourier Transform algorithm in Python to approximate the Fourier series for SVG Paths using the Discrete Fourier Transform.
- Used Matplotlib to draw the logo onto the complex plane.

DentMeds: Online Medicine Procurement | *ExpressJS, NextJS, PostgreSQL, TypeScript, TailwindCSS* — 2024

- Built a full-stack order placement portal for the company with session-based authentication and RESTful APIs.
- Designed dual interfaces: customer-facing product ordering and an office-side order management system.
- Designed the customer interface to display real-time product listings with current pricing and enable seamless order placement to logged-in users.
- Built the office interface as a comprehensive order management system, featuring employee assignment, activity logging, internal notes, and support for recurring orders.
- Architected the system to ensure scalability, maintainability, and efficient data handling, leveraging PostgreSQL as the relational database.

Randomness Challenge | *ExpressJS, ReactJS, MongoDB, Heroku, Git* — 2021

- A behavioural and statistical experiment that tests the ability of users to be random by asking them to click 6 identical buttons in a random fashion.
- Uses different statistical methods to analyse the data collected, uses a REST API to store data in an Object Relational Database.

Technical Skills

Languages: Python, JavaScript/TypeScript, C++, R, Mathematica, SQL, Dart
Frameworks/Library: Flutter, NextJS, ReactJS, NestJS, ExpressJS, React Native, TailwindCSS, Pandas, NumPy, Matplotlib, OpenCV, WordPress
Developer Tools: Vim, LaTeX, Bash, Linux, Git, AWS, VS Code
